

### Mobiltemp SHC™ Series

Mobil Grease, Latvia

Grease

#### **Product Description**

Mobiltemp SHC<sup>TM</sup> Series products are supreme performance antiwear greases primarily intended for high temperature applications. They combine the unique feati polyalphaolefin (PAO) synthetic base fluids with those of an organo-clay, non-soap thickener. The excellent resistance to thermal/oxidative degradation provided PAO base, coupled with the excellent high temperature structural stability and high dropping point of the clay thickener result in outstanding high temperature gradation as well as excellent film protection at temperatures.

Because the PAO base oil has low traction properties (compared to mineral oil), Mobiltemp SHC Series also offer the potential for energy savings through reduced f and lower torque, and reduced temperatures in the load zone of rolling element bearings. The Mobiltemp SHC Series is available as three products: Mobiltemp SHc an NLGI 1 1/2 grade with ISO VG 32 base oil; Mobiltemp SHC 100 is an NLGI 1 1/2 grade with ISO VG 100 base oil; Mobiltemp SHC 460 Special is an NLGI 1/2 with ISO VG 460 base oil, plus molybdenum disulphide for extra wear protection.

The Mobiltemp SHC Series of greases is used in numerous high temperature applications, as well as applications where low temperature start-up or running to important. They provide excellent grease life at high temperatures and offer extended relubrication periods and energy savings potential. Clay greases may softening during prolonged storage.

Mobiltemp SHC Series greases have become the products of choice for many users, in many industries worldwide. Their reputation is based on very wide appl temperature range, and their excellent overall performance.

## Features and Benefits

The Mobil SHC brand of oils and greases are recognised and appreciated around the world for their innovation and outstanding performance. These molecular PAO synthetic products, pioneered by ExxonMobil research scientists, symbolise the continuing commitment to using advanced technology to provide outstar products. A key factor in the development of Mobiltemp SHC Series was the close contact between our scientists and application specialists with key Original Equi Manufacturers (OEMs) to ensure that our product offerings would provide exceptional performance in the continually evolving industrial equipment designs.

Our work with equipment builders has helped confirm the results from our own laboratory tests showing the exceptional performance of the Mobiltemp SHC lubricants. These benefits include superb high temperature performance including thickener integrity and oxidation life with enhanced bearing protection and b life.

To combat high thermal exposure of the oil our product formulation scientists chose PAO synthetic base oils for Mobiltemp SHC Series oils because of their excel thermal/oxidative resistance potential. Our formulators used a special clay thickener to provide excellent structural stability and high dropping point. Mobiltem Series greases offer the following benefits:

Features	Advantages and Potential Benefits	
Outstanding high and low temperature performance	Reduced downtime and lower maintenance costs	
Excellent resistance to oxidation and maintenance of grease structure at high temperatures	Extended service life with longer intervals between relubricatio	
Low coefficient of traction	Reduced energy consumption potential	
Outstanding low temperature pumpability	Easier low temperature start-up and lower running torque	
Very good antiwear protection	Extended bearing life, reduced unanticipated downtime

### Applications

Mobiltemp SHC greases offer excellent high temperature grease life, bearing protection and grease integrity along with excellent low temperature capability and wear protection. Specific applications include:

#### For Mobiltemp SHC 32

- Sealed or re-packable ball and roller bearings
- Splines, screws and some enclosed gearing
- Extreme temperature applications with a recommended operating temperature range of -50° C to 180° C (with appropriate relubrication intervals).

### For Mobiltemp SHC 100

- High speed bearings and thrust bearings where a wide temperature range is desired
- It is particularly suitable for use in electric motor bearings where operating conditions demand reduced friction, low wear and long service life
- Extreme temperature applications with a recommended operating temperature range of -50° C to 200° C (with appropriate relubrication intervals).

#### For Mobiltemp SHC 460 Special

- The presence of molybdenum disulphide makes it particularly suitable for the lubrication of sliding machine elements such as cams and ways, which are sub long relubrication intervals, limited motion or shock loading.
  - · Oven conveyor or kiln bearings which are subject to high temperatures or cycling between high and normal temperatures
  - Extreme temperature applications with a recommended operating temperature range of -40° C to 180° C (with appropriate relubrication intervals).

## Specifications and Approvals

This product meets or exceeds the requirements of:	32
DIN 51825:2004-06 - KP HC 1-2 K -50	X

# Properties and Specifications

Property	100	32	460 SPECIAL
Grade	NLGI 1.5	NLGI 1.5	NLGI 0.5
Thickener Type	Clay	Clay	Clay
Color, Visual	Light Brown	Red	Grey
Copper Strip Corrosion, 24 h, 100 C, Rating, ASTM D4048	1A		1A
Dropping Point, °C, ASTM D2265	308	308	285
Four-Ball Extreme Pressure Test, Weld Point, kgf, ASTM D2596	200+	200+	250+
Four-Ball Wear Test, Scar Diameter, mm, ASTM D2266	0.4	0.7	0.4
Penetration, 60X, 0.1 mm, ASTM D217	280	315	325
Viscosity @ 100 C, Base Oil, mm2/s, ASTM D445		6.1	
Viscosity @ 40 C, Base Oil, mm2/s, ASTM D445	100	32	460
Viscosity Index, ASTM D2270		141
