ExxonMobil Aviation, Pacific Islands

Synthetic Aircraft-Type Gas Turbine Lubricant

Description

Mobil Turbo 319A-2 is a fully synthetic lubricant developed to meet the performance requirement Russian gas turbine aircraft engines which operate on mineral-oil-based lubricants. Formulated fro synthetic hydrocarbon combination of polyalphaolefin (PAO) and hindered ester based stock, M Turbo 319A-2 is fortified with a unique chemical additive system. The resulting product has far supe thermal and oxidation stability than mineral-oil-based lubricants. The ability of Mobil Turbo 319A-resist deterioration and deposit formation allows the potential for extended oil drain intervals and frequent maintenance.

The closely controlled viscosity of Mobil Turbo 319A-2 at -51° C, along with a -60°C pour point, engood low-temperature fluidity, permitting engine starting and lubrication at low temperatures. M Turbo 319A-2 exhibits excellent bulk oil stability at temperatures up to 200° C (392° F). The evapora rate of Mobil Turbo 319A-2 at high temperatures is significantly lower than mineral-oil-based produand helps minimize oil consumption. The lubricant has excellent resistance to foaming.

Mobil Turbo 319A-2 is compatible with existing seal materials, including F Rubber (Viton A), H Rul (Buna N), and silicone, as well as 11 metals used in gas turbine construction.

Features and Benefits

Mobil Turbo 319A-2 offers the following advantages and benefits:

- Low evaporation loss and oil consumption
- Reduced sludge and carbon deposits
- Improved bulk oil oxidation stability and extended oil drain intervals
- Compatible with existing seal materials
- Reduced engine maintenance, including potential for extended drain intervals

Applications

Mobil Turbo 319A-2 Page 2 of 4

Mobil Turbo 319A-2 is recommended for aircraft gas turbine engines that normally operate on mine oil-based lubricants, as well as engines approved to operate on oils meeting the specifications libelow.

Mobil Turbo 319A-2 is approved against the following specification of the Russian Central Institut Aeronatutical Motors (CIAM):

- IMP-10
- MS, 8P, MS-8RK
- 36/1 Ku-A
- VNII NP 50-1-4f and -4u
- B3V and LZ-240
- Mobil Turbo 319A-2 also meets U.S. Military Specification MIL-L-6081C, as well as the essert performance requirements of U.S. MIL-L-7808K, Grade 3.

Typical Characteristics

Mobil Turbo 319A-2	
Physical properties are listed in the table below. Values shown are typical and may vary s lightly.	
Viscosity	
cSt at 40° C	16.2
cSt at 100° C	3.70
cSt at -40° C	2917
cSt at -51° C	12545
Flash point, ° C (°F)	234 (453
Pour point, ° C (°F)	-60 (-76
Specific Gravity	0.852
TAN	0.03

Mobil Turbo 319A-2 Page 3 of 4

Evaporation Loss, %	0.999
5 hr at 175 °C (347°F)	2.4
Foam, ml	
Sequence 1, 24°C (75°F)	30
Foam Stability, after 1 min settling, ml	0
Rubber Swell, %	
NBR-H, 168 hr at 70°C (158°F)	11.9
FKM, 72 hr at 175°C (347°F)	3.0

Health and Safety

Based on available toxicological information, this product is not expected to produce adverse effect on health when used and handled properly. Information on use and handling, as well as health are safety information, can be found in the Material Safety Data Sheet (MSDS) which can be obtained from your local distributor or via the Internet on http://www.exxonmobil.com/lubes.
